

3 D shapes

Pyramids

Prisms

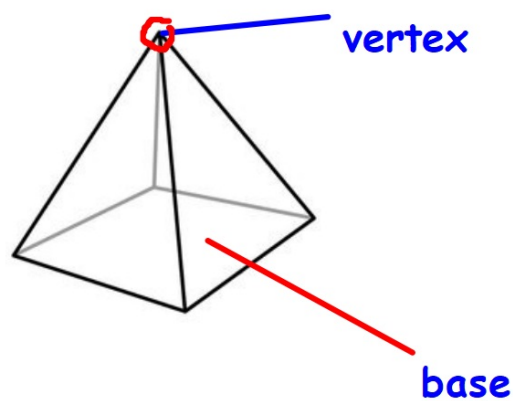

Pyramids are 3D shapes.

They have 1 base.

Their bases are polygons. They meet at a vertex.

All the other faces are triangles.

They are named according to the shape of the base.

Prisms are 3D shapes.

They have 2 bases.

Their bases are polygons. The bases are identical (same shape and size)

All the other faces are rectangles.

They are named according to the shape of the 2 bases.
