

# Sattelites

A satellite is a body that orbits around another body in space.

There are two different types of satellites – natural and man-made.

## Fun facts!

- Satellites travel at 18,000 miles per hour.
- If you put all of the data that our satellites collect in a year on DVDs, it would form a stack nearly 4 times the height of the Empire State Building.

**Natural  
satellites**

Moon

**Man made  
satellites**

Used for weather  
and taking  
photos for Earth
