

A

Find  $\frac{1}{4}$  of a Shape

Fraction

What You Will Learn:

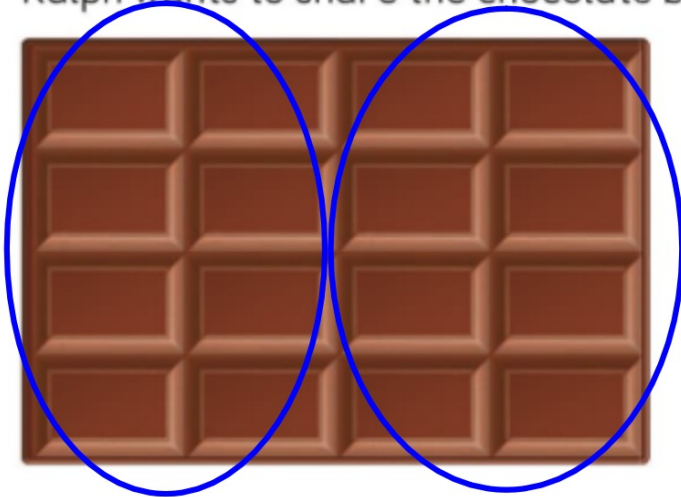

\* Split shapes into four parts.

p. 168

## Look Back

Ralph wants to share the chocolate bar below equally with Ron.

each part is half  $\frac{1}{2}$   
of the chocolate  
bar

How can they share it equally?

If 2 people are sharing it we split the chocolate bar into 2 equal parts.

## Thinking Cap

Caz and Izzy join Ralph and Ron.  
How can you divide the chocolate bar above  
into four equal parts?

- How many children are sharing the chocolate bar now? 4
- How can the chocolate bar be divided into four parts?  
*we can draw a vertical line first then a horizontal line to split the chocolate bar into 4 pieces*

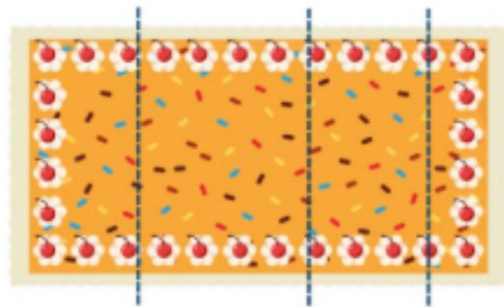

## Let's Learn

- a Eddy cuts a whole cake into 4 equal parts.  
Each part is called a **quarter**.  
You can write a quarter as  $\frac{1}{4}$ .

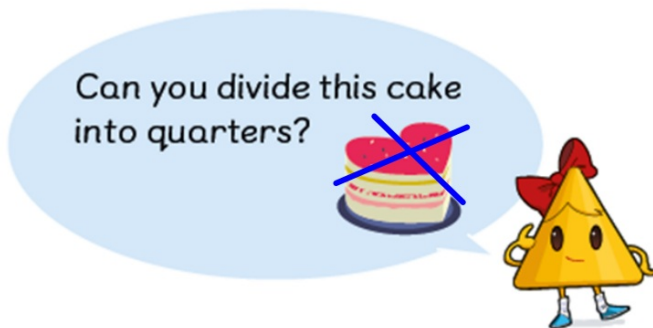

Eddy cuts another cake into four **unequal** parts.  
Each part does not have the same shape and size.

When the parts are unequal, each part is not a quarter.

Fractions are equal parts of a whole

p. 169

No.

Because we will not get 4 equal parts

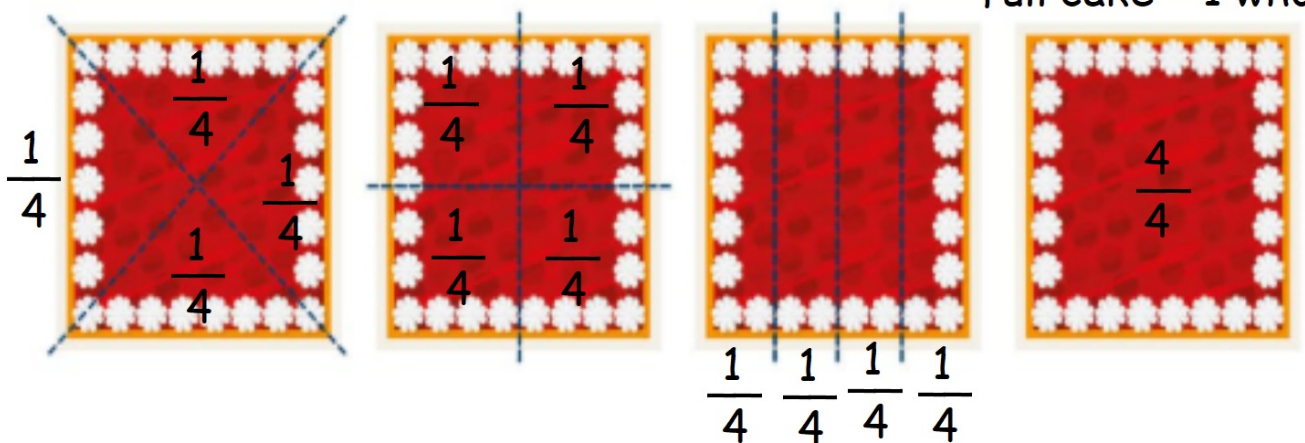

p. 169

b Eddy has another four cakes.

He cuts each cake into quarters in different ways.

Draw lines to show how he can cut the last cake.

full cake = 1 whole

each cake is cut into 4 equal parts

### Let's Practise

I Which shapes are split into unequal parts?

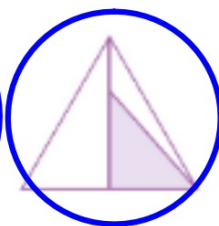

Circle them.

### Let's Practise

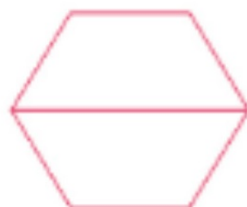

I Which shapes are split into unequal parts?

Circle them.

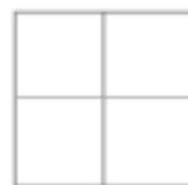

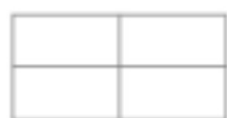

p.170

2 Draw one line in each shape to divide it into quarters.

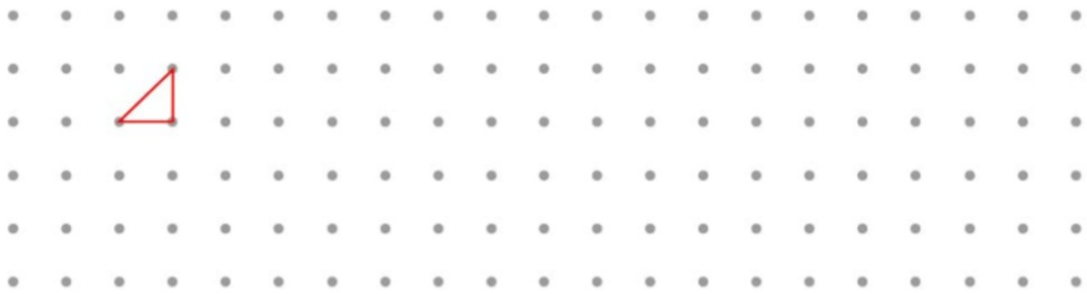

What does each new part represent?

2.

- 3** Kim draws a quarter of a shape on dot paper. p.170  
Show five different ways she can complete the whole shape.

- 3** Kim draws a quarter of a shape on dot paper.  
Show five different ways she can complete the whole shape.
