

## Student's Book p.214

### Look Back

There are 12 <sup>total</sup> apples.

Ralph eats  $\frac{1}{4}$  of <sup>12</sup> them. How many apples does he eat?

We can divide the 12 apples into 4 equal groups of 3 apples.

Ralph eats  $\frac{1}{4}$  or 1 out of 4 groups of the apples. He eats 3 apples.

$\frac{1}{4}$  of 12

$$12 \div 4 = 3 \text{ apples}$$

## Thinking Cap

Izzy eats  $\frac{1}{3}$  of the 12 apples.  
How many apples does she eat?  
How do you know?  
Use counters to help you.

We can divide the 12 apples into 3 equal groups of 4 apples.  
Izzy eats 1 or 1 out of 3 groups of the apples. Izzy eats 4 apples.

3

We can divide the 12  
apples  
into 3 equal groups of 4  
apples.

$\frac{1}{3}$  of 12

$$12 \div 3 = 4 \text{ apples}$$
