

Student's Book p. 217

Look Back

Eddy and Caz each have $\frac{1}{4}$ of a cake.

What fraction of a cake do they have altogether?

We can combine $\frac{1}{4}$ and $\frac{1}{4}$ and make $\frac{2}{4}$

Thinking Cap

 Ron and Izzy each have $\frac{2}{5}$ of a cake.

What fraction of the cake do they have altogether?

How do you know? Use fraction bars to help you.

$$\frac{2}{5} + \frac{2}{5} = \frac{4}{5}$$
