

Look Back

Student's Book p.88

Izzy has some 2D shape cut-outs.

She folds these shapes in half.

Where is the fold line for each shape?

The line of symmetry is the line that divides the shape into two identical halves

Thinking Cap

Izzy folds a sheet of rectangular paper in half. In how many ways can she fold it evenly? How do you know?

A rectangle can be folded in half in two ways, which is vertically along the centre and horizontally along the centre. These are the two lines of symmetry a rectangle has.
