

Student's Book p.7

The longer the bones are, the taller the person is.

4. Compare the measurements. Can you find any patterns between the length of the bones and the height of the person?
5. Find out what types of scientists work with human bones. How do the scientists use information about the length of bones in their work?
6. Use the Internet, books or videos to help you find the answer.
7. Share your findings with the class.

Orthopedic doctors

Chiropractors

X-ray technician

Forensics officer

Our bodies are different from one another. We should respect one another and not make hurtful remarks about someone's body.
