Science worksheet 3.3

Name : _____

Date : _____

Grade 4 ()

1. Eagles hunt for food to survive. They have strong claws and sharp senses. Which of these sentences is/are true?

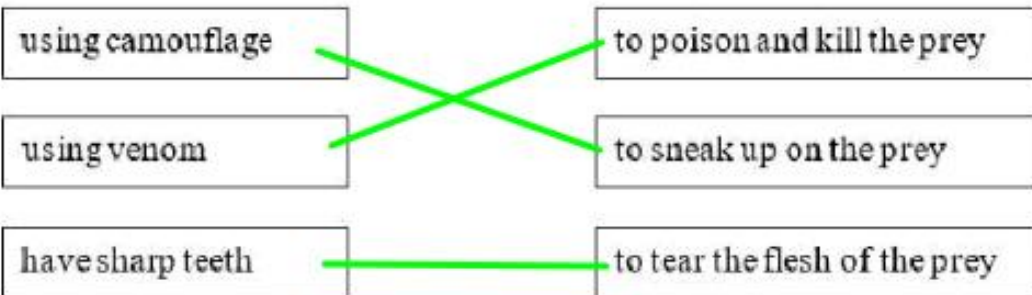

Tick (✓) the correct box beside each sentence.

Statement	true	false
Eagles use camouflage to help them hunt for their prey		✓
Only predators like eagles have sharp senses.		✓
The strong claws help eagles hold on to their prey tightly.	✓	

2. Draw a line to match each adaptation to how it helps predators hunt for food.

adaptation

how it helps predators to hunt for food

3. Andy sees the living thing below in the garden.

- a. Andy mistakes the living thing as part of a plant. Which adaptation does the living thing have that causes this to happen?
Circle the correct answer.

it has sharp spines

it looks like a leaf

it can fly

- b. Explain how this adaptation helps the living thing survive in its environment.

The adaptation helps it blend in with its surroundings.

so, it can avoid being seen by its predators easily.

4. Cheetahs live in dry areas with hard grounds.

Suggest what would happen if the cheetahs were moved to wetlands.

The cheetahs would not be able to move fast to hunt for their prey in wetlands. They might not be able to survive.

5. Most prey have their eyes on the sides of their heads. Describe how this helps them get away from danger.

By having the eyes on the sides of their heads, the prey have a wider vision. This allows them to spot approaching predators and get away from danger quickly.
