

## 7Ed Chromatography

- 1 C – individual solutes separated from a solvent
- 2 Dots of the inks were placed near the base of the paper. The paper was then placed in the beaker. A small amount of solvent was placed in the beaker, so that the level of solvent was below the ink dots on the paper.
- 3 **a** blue  
**b, c** Any suitable conclusion, such as: the red colour is pure, the others are mixtures; the blue is formed from two different colours/blue and red; green contains the same blue as the blue dye.
